

NOVEL NUCLEIC ACID SEQUENCES ENCODING HUMAN BREAST TUMOR-
ASSOCIATED PROTEIN 47-LIKE POLYPEPTIDES

ABSTRACT

This application is drawn to novel nucleic acid sequences encoding mammalian polypeptides that have sequence similarity to human breast tumor-associated protein 47. The nucleic acid sequence is 1987 nucleotides long and contains an open reading frame from nucleotides 991 to 1447. The novel, encoded polypeptides comprise 152 amino acid residues.
